

# Casualty Insurance

This introductory course is designed for liability underwriters and loss adjusters seeking a comprehensive understanding of General Third-Party Liability (GTPL) and Professional Indemnity (PI) insurance. You will gain insight into the structure of these products, their integration within the broader Casualty business portfolio, and the opportunity to apply your knowledge through real case studies.

Following this course, you will have a comprehensive understanding of the various Lines of Business (LoB) within Casualty, with a particular emphasis on Liability and Professional Indemnity, and will be equipped to analyse and respond to practical scenarios.

## Learning goals

- Recognise the interaction between liability risks and coverage.
- Explain the cornerstones of a standard GTPL policy, including triggers, exclusions and extensions of coverage.
- Design a commercial liability and professional indemnity proposal for a Swiss food company.
- Contribute to the continuing development and enhancement of liability insurance products based on your acquired broad understanding of the liability insurance key drivers.

## Audience

Participants should have a basic knowledge of Liability products and at least one year's experience in underwriting (including knowledge of specific industry terms and an ability to assess various risks in order to rate and determine insurance requirements) or comparable experience (such as a loss adjuster).

## About the event

Training  
programme

Property &  
Casualty

English

### Includes

9 modules,  
Certificate
